**Toshiba and CMS Announce Distribution Agreement**  
***Collaboration Brings Advanced CT Imaging and***  
***Virtual Simulation Software Solutions to Radiotherapy***

**TUSTIN, Calif. and ST. LOUIS, MO.** (August 30, 2006) – Toshiba America Medical Systems, Inc., a leading provider of diagnostic imaging technology, and CMS, Inc., the worldwide market leader in radiation treatment planning and workflow management solutions, today announced a distribution agreement that delivers integrated CT imaging and virtual simulation solutions to Toshiba’s customers.

The agreement unites the powerful treatment planning capabilities of Toshiba’s Aquilion™ LB computed tomography (CT) scanner – designed to deliver superior patient positioning with superior image quality and clinical performance – with the innovative features and functionality of CMS’s virtual simulation software solutions and planning workflow management tools.

Under the terms of the agreement, Toshiba will offer its customers CMS’s FocalSim CT simulation workstation – a flexible PC-based application that includes multi-modality image fusion, patient contouring, CT simulation and plan review modules, along with CMS Direct Access, a unique distributed workflow management tool that supports robust remote access to CMS planning applications from any location inside or outside the clinic.

“We believe our agreement with CMS will play an integral role in the delivery of a high performance system for cancer patient treatment,” said Doug Ryan, director of the CT Business Unit, Toshiba America Medical Systems, Inc. “While our Aquilion LB solves the primary

challenge of patient positioning with the industry's largest bore opening of 90 cm and the largest scanning field of view of 70cm, the addition of FocalSim workstations will dramatically expand clinical capabilities – enhancing the delivery of treatment and ultimately results.”

The Focal product line from CMS is an integrated suite of innovative software tools that address key elements of radiotherapy clinical workflow. Focal is a Windows-based distributed planning platform that includes advanced contouring, simulation, image fusion and plan review capabilities, and combines an intuitive user interface with powerful but easy-to-use automation tools to increase overall planning efficiency and streamline clinical workflow. Focal is fully DICOM compliant and interconnects seamlessly with CMS's XiO and Monaco planning solutions along with other third-party systems.

With CMS Direct Access, users can access these planning tools securely from any networked PC via a high-speed Internet connection, increasing resource flexibility and productivity. CMS Direct Access also supports remote and distributed planning models, facilitating the sharing of resources and expertise inside the hospital and across regional networks.

“We are pleased to partner with Toshiba in the delivery of integrated imaging and planning solutions to the radiotherapy marketplace,” said Andrew C. Cowen, president and CEO of CMS. “The combination of Toshiba's leading diagnostic imaging products and CMS's innovative software applications and flexible technology solutions represents a joint effort to bring powerful new tools to the oncology market with the goals of improving clinical workflow and efficiency, enhancing the quality of care, and improving patient outcomes.”

### **About Toshiba**

With headquarters in Tustin, Calif., Toshiba America Medical Systems markets, sells, distributes and services diagnostic imaging systems, and coordinates clinical diagnostic imaging research for all modalities in the United States. Toshiba Medical Systems Corp., an independent group company of Toshiba Corp., is a global leading provider of diagnostic medical imaging systems and comprehensive medical solutions, such as CT, Cath & EP Labs, X-ray, Ultrasound, Nuclear Medicine, MRI and information systems. Toshiba Corp. is a leader in information and communications systems, electronic components, consumer products, and power systems. Toshiba has approximately 161,000 employees worldwide and annual sales of \$54 billion.

## **About CMS**

CMS is a worldwide leader in the development and support of radiation treatment planning and workflow management solutions. With treatment planning systems installed in more than 1,500 sites worldwide, CMS is the global resource to radiation oncology community. A privately held corporation, CMS employs 270 professionals in its headquarters located in St. Louis, MO and regional offices in Tampa, Florida; Freiburg, Germany; Tokyo, Japan; Sydney, Australia; and Shanghai, China.

**Monaco will be available in USA pending regulatory approval.**
